SDC2026 Vortex Replit POU

Proof of Replit Utilisation

Live URL: https://sdc-hackathon-submission-template.replit.app
Repository: Aunyiqi/SDC_Hackathon_Submission_Template
Branch: vortex-orderguard-submission

Team Vortex · Vortex OrderGuard

Prepared 24 October 2026

Evidence of Use

Replit was used to import the GitHub project, configure the Python environment and server-side secrets, preview and test the application, and publish the public Vortex OrderGuard demo.

The deployment is publicly reachable at the live URL above. Public visitors are read-only by default; owner controls require a private access code and are limited to synthetic demo records.

- Published public HTTPS demo
- Replit publication confirmed in project UI
- Gunicorn production server used for deployment
- Synthetic data only
- Owner access protected by secret-backed session controls

Outcome

Successful public deployment used for judging and presentation.

Supporting repository note: docs/REPLIT_PROOF_OF_USE.md

No private owner code or deployment secret is included in this PDF.
